The work of CAMPBELL & CAMPBELL is internationally recognized for advancing the art of sustainable, regenerative design in the landscape.

Critically acclaimed at the "intersection of poetry and civic purpose", this work has ranged from public projects noted for design processes involving large numbers of participants, through creative partnerships with clients, fellow scientific, planning, public policy and design professionals, and constituencies of cultural, academic and research institutions, environmental organizations and communities - collaboratively creating landmark works recognized as expressions of commitment to a sustainable future.

CAMPBELL & CAMPBELL has had the opportunity to work in the context of significant cultural and natural settings throughout the United States and abroad. Our work is based on the premise that **landscapes are living systems** that by definition include humanity –

we believe landscapes must be evolving artifacts authentically expressive of expanding conceptions of community and new relationships with the rest of nature. Our work ranges from city and regional scale urban landscape infrastructure planning and design – transit systems, waterfronts, academic and research campuses, cultural destinations, museums, arboreta, and libraries – through parks, squares, plazas and works of public art to ecosystem remediation and interpretation in diverse landscapes in North America, Europe and Asia experiencing rapid socio/economic growth and unprecedented environmental change .

## SUSTAINABILITY

The work of CAMPBELL & CAMPBELL positions "sustainable design" in the broadest possible context, and defined not only on technology and consumption metrics, but as authentically coming out of a place and a community. Our approach is founded on discovering, expressing and sustaining **community** by the articulation and practice of an ethic of **environmental and social responsibility**, through a continuing engagement with **the creative process**.

## COMMUNITY

Our work in the civic realm – the expression of vibrant settings for public life - and in planning and design for University, Research, Cultural and Health Campuses is based on our belief that the expression of landscape is fundamentally the expression of community. We are widely known for collaborations such as Maguire Gardens at the LA Central Library, called the most successful urban open space in downtown Los Angeles.

## ENVIRONMENTAL AND SOCIAL RESPONSIBILITY

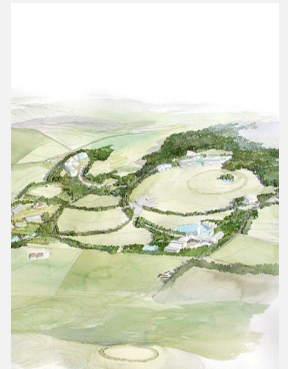

Environmental and social responsibility organically informs all of our efforts. We are leaders in the planning and design of projects explicitly linking environmental design and public health, fitness and well-being, notably including our pioneering projects for Audubon and the National Museum of Science and Industry in London.

## CREATIVE PROCESS

CAMPBELL & CAMPBELL is internationally noted for its successful collaborations with partners, clients, regulatory agencies and consultants, and the public at large, through participatory planning and design processes which address and recover connections to community and the natural world, building community and inspiring human creativity through engagement with nature .

CAMPBELL & CAMPBELL is the recipient of significant professional recognition, including invited international commissions and citations, numerous awards from the AIA, ASLA, APA, National Waterfront Center, Highest LEEDS Platinum Honors from the United States Green Building Council, and United States Congressional recognition. ## EXPERIENCE

*Our experience ranges from urban infrastructure and streetscapes through cultural, museum, research, health care, academic and residential campuses, plazas, parks and squares, environmental remediation and renewal and adaptation of historic sites, through the realization of distinctive residential communities and estates. We have collaborated in creating environments for living, well-being, creativity, re-creation and experiencing community and nature in many contexts throughout the region and beyond.*

## HEALTH AND WELL-BEING

*We are leaders in the planning and design of projects explicitly linking environmental design and public health, fitness and well-being. Our honors include recognition the State of California for excellence in barrier-free universal access design, excellence in design for water and energy efficiency and heritage conservation.*

## COMMUNITY WITH NATURE

*We are dedicated to collaborating with our clients to achieve community with nature.*
